Medical University

Prof. Dr. Paraskev Stoyanov - Varna

The Medical University of Varna is a high-tech university and has more than half a century of history and traditions. The classical models of teaching at the university are well combined with the latest technologies – 3D anatomy training and a system for complementary e-learning rich in electronic content.

The Medical University of Varna offers uncompromised quality of training and it is the first and the only university in Bulgaria which introduced the model of the European Foundation for Quality Management (EFQM ®) for Business Excellence in 2008.

The university offers to its students modern environment with unlimited opportunities for their development – high-tech labs and training premises, a library with electronic reading rooms and access to the best world information databases, modern sport facilities and professional football, volleyball and tennis playgrounds, a rehearsal hall for the university music band, a drama and folk dance troupes.

Undergraduate Programs

Medical University "Prof. Dr. Paraskev Stoyanov"- Varna offers training to applicants (who have completed secondary education) in 14 medical specialties in Bulgarian language and *conducts training in English language - in Medicine and Dental Medicine.*

Medicine Course

The six-year medical studies in English allow students to enroll in the medical school directly from high school. The program is designed for students who are strongly motivated, have a good command of both written and spoken English and interest in medical science.

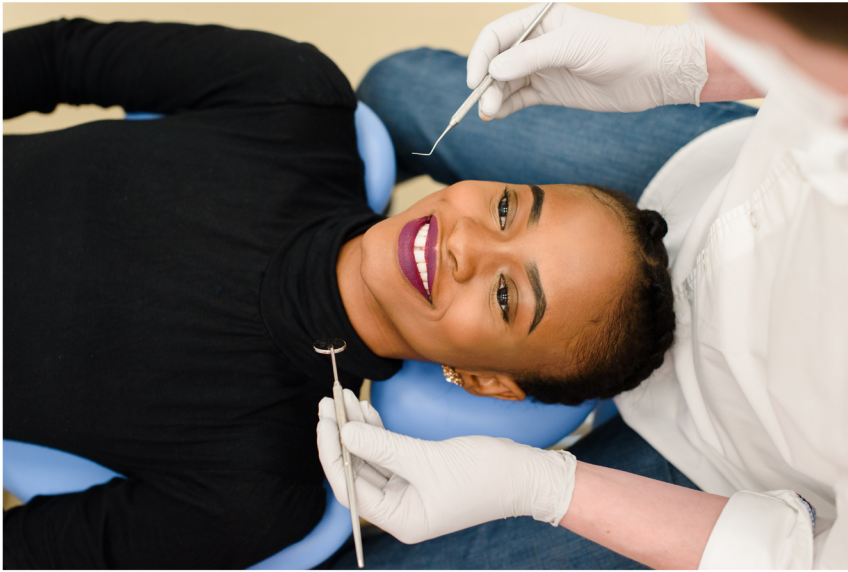

The first two years of medical school includes an overview of fundamental or basic science courses. The first year is devoted to general understanding of biological, chemical and physical sciences applicable to the practice of medicine. Starting with the second year, the focus progressively narrows down, channeling the studies towards those biomedical sciences that are most relevant for a practicing physician.

The clinical years are what all medical students anticipate, a time when lectures and laboratories translate into patient care. The clinical studies examine the application of the biomedical sciences mastered during the first two years of medical school. The teaching from the third year onwards takes place exclusively in clinical settings of the modern facilities of the University teaching hospitals and involves work with patients admitted for treatment.

The last year of medical studies has exclusively practical purposes. During the last year, students work under the direct guidance of the assistants and instructors with high academic positions in the clinics.

After the successful completion of the six years course of academic studies in the Programme of medicine, students are awarded a Diploma of completed higher medical education. Graduates are conferred Master's degree along with the professional qualification "physician"- Doctor of Medicine.

Undergraduate Programs

Dental Medicine

The training in Dental Medicine in English is full-time only. Except for the fact that instructions, labs, lectures and examinations are conducted in English, the curriculum of the six-year Program in Dental Medicine taught in English is identical with the coursework pursued by Bulgarian medical students.

Clinical and medical training is conducted from second to tenth semester as it includes specialized training in general medical and clinical disciplines (second stage).

The theoretical training is conducted by obligatory, optional and facultative disciplines, in form of lectures, seminars, practical exercise (clinical work with dental patients) and self-training.

The practical training is conducted by practical studies during the semester training, training practices and pre-graduation practice. The practical instruction of students includes specific volume of practical therapeutic activity.

Under the tutelage of highly trained and productive scientists, the student acquires a solid foundation in biomedical sciences. This knowledge forms the basis for understanding the wide variety of diseases that a dentist must diagnose and treat; it also forms the foundation for the effective practice of preventive dentistry. Skillful and experienced clinical teachers guide the student in acquiring technical skills and developing clinical judgment.

The pre-graduation internship/practice (third stage) is performed in cycles in prosthetic dentistry, conservative dental treatment, periodontology and diseases of the oral mucosa; oral and maxillo-facial surgery, pediatric Dental Medicine, orthodontics. Every cycle (stage) ends with a state examination. Upon graduation, students obtain the professional qualification of "Master-doctor in Dental Medicine" and education and qualification degree "Master".

Postgraduate Programs

Postgraduate programs in English related to the Public Health are available in the Medical University Varna as well.
